BENEFITS

The institutional gateway to DeFi

Maple Finance is strategically positioned to capture a significant share of the institutional credit market by providing a compliant and transparent bridge between traditional finance and decentralized finance. The platform's exclusive focus on institutional clients addresses a critical need for professionally managed, onchain credit products that meet stringent compliance and KYC standards.

Institutional credibility and leadership

Maple's leadership team comprises seasoned professionals from top-tier financial institutions, including J.P. Morgan, Bank of America, and Deutsche Bank, who bring deep expertise in capital markets and structured finance to the DeFi ecosystem. This foundational credibility has secured strategic backing from reputable investors like BlockTower Capital and is reinforced by a commitment to transparency through public audits and detailed financial disclosures.

Sustainable economic model

The economic engine of the protocol is fueled by its highly successful institutional lending activities, which have already generated over $10.8 billion in total loan originations and paid $104 million in interest to lenders. A portion of the fees from this activity is used to fund strategic buybacks of the SYRUP token from the open market. This mechanism creates a direct link between platform growth and token value, designed to benefit all holders.

FUNDAMENTALS

- Maple brings private credit markets to the blockchain, enabling institutional investors to lend directly to vetted borrowers with full transparency and standardized risk frameworks. This positions Maple as a compliant bridge between traditional finance and DeFi, capturing a significant share of institutional lending activity.
- With a team from top global banks and backing from leading investors, Maple combines deep capital markets expertise with on-chain transparency. This credibility underpins trust among institutional participants and supports long-term platform adoption
- Maple's lending engine has originated over $10.8 billion in loans and paid $104 million in interest, generating strong fee revenue. A portion of these fees funds strategic buybacks of the SYRUP token, directly tying protocol growth to token value and rewarding long-term holders.

RISK FACTORS

- As a private credit platform, Maple's core activity involves lending to businesses. Borrower defaults, economic downturns, or flawed underwriting could lead to capital losses, damage investor confidence, and reduce platform activity.
- Defaults require off-chain collections, restructurings, and legal spend; timelines and outcomes are uncertain vs. purely collateralized DeFi liquidations.
- A visible default or fraud can trigger lender pullbacks across pools, raising funding costs and tightening credit precisely when liquidity is scarce.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through investable instruments based on that index. The Company makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. The Company is not an investment advisor and makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth on this website. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other investment product or vehicle. The Company is not a tax advisor. A tax advisor should be consulted to evaluate the impact and consequences of making any particular investment decision. Inclusion of any assets within an index is not a recommendation by the Company to buy, sell, or hold such security, nor is it considered to be investment advice. Investments into crypto currencies and/or digital assets are subject to material and high risk including the risk of total loss. The calculated prices may not be achieved by investors as the calculated price is based on prices from different trading platforms. Furthermore, an investment into crypto currencies and/or digital assets may become illiquid depending on the trading platform or investment product used for the specific investment. Investors should carefully review all risk factors disclosed by the relevant trading platform or in the product documents of relevant investment products.

Charts and graphs are provided for illustrative purposes. Past performance is not an indication or guarantee of future results. The charts and graphs may reflect hypothetical historical performance. All information presented prior to the launch date is back-tested. Back-tested performance is not actual performance but is hypothetical. The back-test calculations are based on the same methodology that was in effect when the index(es) was officially launched. It is not possible to invest directly in any index. Prospective application of the methodology used to construct the index(es) as well as revisions to economic data may not result in performance commensurate with the back-test returns shown. The back-test period does not necessarily correspond to the entire available history of the index(es). Another limitation of using back-tested information is that the back-tested calculation is generally prepared with the benefit of hindsight.

Back-tested data and/or information reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk in actual trading. For example, there are numerous factors related to the equities, fixed income, or commodities markets in general which cannot be, and have not been accounted for in the preparation of the index information set forth, all of which can affect actual performance. The index returns shown do not represent the results of actual trading of investable assets.
