Objective and Investment Policy

This Sub-Fund is passively managed. The objective of this Sub-Fund is to track the performance of MSCI Europe ESG Selection P-Series 5% Issuer Capped Index (the "Index"), and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index. The anticipated level of the tracking error, under normal market conditions is indicated in the prospectus of the Sub-Fund. The Index is a Net Total Return Index: dividends net of tax paid by the index constituents are included in the Index return. MSCI Europe ESG Selection P-Series 5% Issuer Capped Index is an equity index based on the MSCI Europe Index ("Parent Index"), representative of the large and mid-cap securities of the 15 developed European countries and issued by companies that have the highest Environmental, Social and Governance (ESG) rating in each sector of the Parent Index. The Index methodology is constructed using a "Best-in-class approach": best ranked companies are selected to construct the Index. "Best-in-class" is an approach where leading or best-performing investments are selected within a universe, industry sector or class. It excludes companies falling behind on an ESG level, particularly on the basis of ESG ratings. Using such Best-in-class approach, the Index follows an extra-financial approach significantly engaging that permits the reduction by at least 20% of the initial investment universe (expressed in number of issuers). The ESG key issues include for instance, but are not limited to, water stress, carbon emissions, labor management or business ethics. The limits of the approach adopted are described in the Sub-Fund's prospectus through ESG risk factors such as Sustainable investment risk. The ESG score of companies is calculated by an ESG rating agency, using raw data, models and estimates collected/calculated using methods specific to each provider. Due to the lack of standardisation and the uniqueness of each methodology, the information provided may be incomplete. Assessment of sustainability risks is complex and may be based on ESG data which is difficult to obtain, incomplete, estimated, out of date and/or otherwise materially inaccurate. Even when identified, there can be no guarantee that these data will be correctly assessed. The Index applies exclusions to companies involved in activities considered non-aligned with the Paris Climate Agreement (coal extraction, oil, etc.). For further information on the exclusions applied by the Index pursuant to the EU Paris-aligned Benchmarks (PAB), please refer to the "Guidelines on funds' names using ESG or sustainability-related terms" section of the Prospectus. More information about the composition of the Index and its operating rules are available in the prospectus and at: www.MSCI.com. The Index value is available via Bloomberg (MXEUESL5). The exposure to the Index will be achieved through a direct replication, mainly by making direct investments in transferable securities and/or other eligible assets representing the Index constituents in a proportion extremely close to their proportion in the index. The Investment Manager will be able to use derivatives in order to deal with inflows and outflows and which relate to the Index or constituents of the Index for investment and/or efficient portfolio management. In order to generate additional income to offset its costs, the Sub-Fund may also enter into securities lending operations. In order to hedge the currency of the share against the currency of the index, the Fund uses a hedging strategy which reduces the impact of changes between the currency of the Index and the currency of the share class."

Lower Risk — Higher Risk

⚠ The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances. This product does not include any protection from future market performance so you could lose some or all of your investment. Beside the risks included in the risk indicator, other risks may affect the Sub-Fund's performance. Please refer to the MULTI UNITS LUXEMBOURG prospectus.

MONTHLY COMMENTARY (Source: Amundi)

Management commentary

The eurozone delivered a positive surprise in July, with a preliminary estimate of Q2 growth significantly exceeding expectations. The Q2 flash GDP came in at +0.4% quarter-on-quarter (compared to 0.1% in Q1), bringing annual growth to +1.0% (versus +0.5% in Q1). This rebound follows several quarters of stagnation amid an energy shock linked to the conflict in the Persian Gulf.

The resumption of hostilities in the Persian Gulf weighed on investor sentiment in July. The dominant theme of the month was the sharp correction in semiconductor and memory stocks, which had driven markets higher in the first half of the year. Investors became increasingly skeptical about the future profitability of capex by tech giants in artificial intelligence infrastructure.

The decline in US and Asian markets was partially offset by the outperformance of European and Chinese stock exchanges, which recorded gains of +0.5% for the Eurostoxx 50 and +13.9% for the HSCEI. In Europe, several large companies reported strong Q2 results as investors sought new themes. For example, Airbus saw a strong increase in its profits, as did Deutsche Bank and BNP Paribas, which confirmed a significant rise in their earnings.

MONTHLY COMMENTARY (Source: Amundi)

Management commentary

Oil prices were extremely volatile in July, driven by the ups and downs of the Iran-US conflict. Brent crude reached a peak of $102 before returning to around $90 depending on periods of tension and calm. In the currency market, the dollar depreciated slightly. The euro-dollar moved back above 1.15 at the end of the month. The Fed’s decision to keep its key rates unchanged supported emerging market currencies. The yen, meanwhile, appreciated by 3.2% following interventions in the currency market. Gold rose by 1.0% to $4046/ounce but remains under pressure.

Policy regarding portfolio transparency and warning on secondary market
The policy regarding portfolio transparency and information on the funds assets are available on amundietf.com. Shares purchased on the secondary market cannot usually be sold directly back to the fund. Investors must buy and sell shares on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. Investors may pay more than the current net asset value when buying shares and may receive less than the current net asset value when selling them.

« Technical net asset values may be calculated and published for any calendar day (excluding Saturdays and Sundays) that is neither a business day nor a transaction day. These technical net asset values are merely indicative and will not be the basis for purchasing, switching, redeeming and/or transferring shares."
