Key Risks

Bonds are exposed to credit risk and interest rate risk. There is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. If interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment.

The following is applicable if you subscribe for or settle shares in a different currency than the fund or share-class currency: Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies.

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss.

Investment Policy

- The aim is for your investment to achieve before fees and expenses an excess return over a benchmark reflecting the performance of EUR-denominated, investment grade (with a rating of better or equal than Baa3/ BBB-) corporate debt securities.
- In order to achieve the investment objective, the Fund will adopt a Direct Investment Policy, which is actively managed, against the ICE BofA Euro Corporate Index as a performance benchmark
- The portfolio is built using a combination of top-down and bottom-up research. Bottom-up analysis focuses on individual issuers and securities, considering factors such as financial strength, management quality, liquidity, debt structure, and covenant protections. Top-down analysis evaluates industries, market conditions, and broader economic trends. The process also looks for attractive opportunities in new issues, relative value opportunities across securities and issuers, and temporary market inefficiencies that may enhance returns.
