Benchmark : MSCI All Country World Index (Total Return Net)	
Markets Global equities regained poise in August, with developed market stocks up 2.6% amid resilient growth and healthy corporate earnings. Energy and technology delivered the strongest EPS growth, while results also showed signs of broadening. In this supportive backdrop, growth and value posted identical returns for the month across styles and sectors worldwide.	
Helped The strongest contribution arose from names across our sustainable food & water subtheme.	
Hurt The weakest contribution arose from names across our renewables & electrification subtheme.	
Outlook There has been no shortage of economic and geopolitical events in 2026. While uncertainty around the Middle East conflict remains high, the base case is near-term de-escalation. We are monitoring developments closely and focusing on identifying stocks dislocated from their longer-term fundamentals.	

[^]The Benchmark is a Performance Comparator and the Fund may bear little resemblance to its Benchmark. The Benchmark has been chosen as it reflects the investment strategy for the Fund.
Past performance and forecast is not a reliable indicator of current and future results.

Fund Overview

Investment objective

Month in Review

- **The underlying strategy underperformed** its benchmark, the MSCI All Country World Index, for the month of August 2026.
- **Not holding a position in Alphabet**, a dominant search and digital advertising platform expanding into cloud and AI, contributed to performance during the period. The stock underperformed as elevated capex to fund AI infrastructure pushed quarterly free cash flow into negative territory despite strong revenue and cloud growth, raising investor concerns about the returns from significant capital deployment.
- **Not holding a position in Broadcom**, a semiconductor company that designs and supplies chips for data centres and networking, contributed to performance during the period. The stock underperformed as elevated market expectations, unchanged full-year AI revenue guidance and uncertainty surrounding the financing and risk structure of the XPV platform outweighed continued strong growth in custom AI accelerators and networking products.
- **An overweight position in Contemporary Amperex Technology (CATL)** detracted from performance in August. Shares weakened as investors took profits following strong prior gains and sentiment toward the electric vehicle and battery supply chain softened. While the company remains a global leader in battery technology and energy storage solutions, near-term valuation concerns and increased market volatility weighed on the stock.
- **An overweight position in NextEra Energy**, a major North American energy infrastructure company developing gas-fired power supply and data centre hubs, detracted from performance during the period. The stock underperformed due to regulatory approval uncertainties surrounding key infrastructure projects, interest rate sensitivity impacting capital costs and execution risks associated with large-scale data centre power purchase agreements.

Looking Ahead

- **We expect the companies held in the portfolio** to benefit from the significant investment needed to decarbonise global energy supplies and address the challenge of climate change.
- **With energy independence a growing focus** of governments worldwide, there is a significant implication for policies and subsidies to support large-scale investment into climate change solutions.
- **Accelerated investment timelines** come on top of growing efforts of companies and consumers worldwide to target a carbon-neutral environment by 2050.
- **Capital being deployed** by companies in the solutions space continues to grow as technology becomes more widely adopted and the pace of innovation increases. We expect the overall cost of many of these solutions to diminish as the economies of scale are felt more widely, leading to more and more adoption around the world.

RISK PROFILE

The value of equities may go down as well as up in response to the performance of individual companies and general market conditions, sometimes rapidly or unpredictably. If a company goes through bankruptcy or a similar financial restructuring, its shares in issue typically lose most or all of their value.

Since the instruments held by the Sub-Fund may be denominated in currencies other than the Base Currency, the Sub-Fund may be affected unfavourably by exchange control regulations or fluctuations in currency rates. For this reason, changes in currency exchange rates can affect the value of the Sub-Fund's portfolio and may impact the value of the Shares. The Sub-Fund seeks to provide a return above the Benchmark; however the Sub-Fund may underperform the Benchmark.

Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks.

Thematic risk

To the extent that a Sub-Fund invests a large portion of its assets in a single theme it is likely to be more volatile and carry a greater risk of loss than a Sub-Fund that invests more broadly. Sub-Funds that are concentrated in investments exposed to a single theme may be subject to periods of underperformance and could be disproportionately affected by political, taxation, regulation, or government policy prejudicial to the theme which could lead to decreased liquidity and increased volatility in the value of the relevant securities.

Smaller companies risk

Stocks of smaller companies which may be less liquid, more volatile and tend to carry greater financial risk than stocks of larger companies.

The risk indicator assumes you keep the product for 5 years. The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document.
