Benchmark : Bloomberg Global Aggregate Index Total Return USD Unhedged.	
Markets Rates sold off in July; portfolio duration overweight detracted, partly offset by underweight US duration and EM carry; constructive medium-term growth outlook supports diversified, carry-focused positioning. Developed yields were higher on energy and resilient data; hawkish holds reinforced higher-for-longer pricing; US 10-year 4.76%, Bund 3.20% and Gilt 5.06% by July-end.	
Helped Underweight US duration as Treasuries sold off post-Federal Reserve (Fed) hold; emerging markets (EM) hard-currency debt carry; FX overweights USD, NZD and SEK plus selective higher-carry EM.	
Hurt Overweight UK duration as gilts backed up on BoE 6–3 hawkish hold and fiscal sensitivity; agency MBS pressured; IG credit hit by tight valuations and heavy issuance.	
Outlook Expansion probability 80%; Fed expected hold ~3 5/8% through year-end, others largely on hold; maintain carry bias with IG/EM, modest duration Europe/Canada/Australia and watch geopolitics/AI.

Month in Review

- **In July, the portfolio's overweight duration detracted as government bond yields rose** across developed markets. Higher energy prices and resilient economic data led investors to reassess the outlook for inflation and interest rates. UK duration was a key headwind as gilt yields backed up, with the Bank of England's (BoE) 'hawkish hold' keeping a tighter-policy risk premium embedded in the curve. Although Bank Rate was unchanged at 3.75%, the 6–3 vote split (with three members voting to hike) signalled a more hawkish stance. Renewed fiscal sensitivity also increased volatility, as investors focused on uncertainty around the new government's fiscal plans, adding upward pressure on gilt yields.
- **The portfolio's underweight US duration contributed** as Treasury yields moved higher after the Fed delivered a hawkish hold. While policy rates were unchanged at 3.5%–3.75%, the 9–3 split, limited forward guidance and renewed inflation concerns linked to higher oil prices pushed term premia higher and triggered a sell-off in Treasuries, reinforcing our preference to remain underweight US duration.
- **Across spread sectors, performance was mixed.** EM hard-currency debt provided the main positive contribution as carry remained supported by subdued volatility and continued investor interest. Agency mortgage-backed securities (MBS) and investment-grade corporates detracted: MBS was pressured despite constructive technicals, while investment grade suffered from tight valuations and heavy issuance amid weaker market functioning.

Looking Ahead

- **In our June 2026 Investment Quarterly**, we raised the probability of expansion from 60% to 80%, allocating 40% each to above-trend growth and sub-trend growth, and reduced the risk of contraction to 20%, split evenly between recession and crisis at 10% each. This reflects easing geopolitical risks after Middle East de-escalation, the prospect of lower energy prices and strengthening global capital expenditure (CapEx) driven by AI, energy security, defence and infrastructure investment. While growth remains resilient, the key question is whether expansion becomes productivity-led or inflationary.
- **Policy remains nuanced.** We expect the Fed to hold rates at about 3 5/8% through year-end, balancing improving inflation, helped by lower energy costs, against the risk of labour market tightness as the CapEx cycle broadens. Other major central banks are largely expected to remain on hold, with limited scope for further hikes.
- **We remain mindful of renewed geopolitical volatility** and the risk that enthusiasm around AI investment becomes excessive, but resilient households and businesses, structurally expansionary fiscal policy and a broadening investment cycle support a constructive outlook into 2027.
- **Portfolios remain positioned for diversified**, carry-oriented opportunities, favouring overweight investment-grade corporate credit and selective EM debt.

RISK PROFILE

The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer. Issuers of debt securities may fail to meet payment obligations or the credit rating of debt securities may be downgraded. These risks are typically increased for below investment grade debt securities which may also be subject to higher volatility and lower liquidity than investment grade debt securities. The credit worthiness of unrated debt securities is not measured by reference to an independent credit rating agency.

Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market currencies may be subject to volatile price movements

Emerging market securities may also be subject to higher volatility and lower liquidity than developed market securities respectively.

Investments in onshore debt securities issued within the PRC through Bond Connect are subject to regulatory change and operational constraints which may result in increased counterparty risk. Market volatility and potential lack of liquidity due to low trading volumes may cause prices of bonds to fluctuate significantly.

To the extent that the Sub-Fund uses financial derivative instruments, the risk profile and the volatility of the Sub-Fund may increase.

Convertibles Convertible securities have characteristics of both debt and equity securities and carry credit, default, equity, interest rate, liquidity and

market risks. Convertible bonds may also be subject to lower liquidity than the underlying equity securities.

Contingent Convertible Securities are likely to be adversely impacted should specific trigger events occur (as specified in the contract terms of the issuing company). This may be as a result of the security converting to equities at a discounted share price, the value of the security being written down, temporarily or permanently, and/or coupon payments ceasing or being deferred.

Asset-backed and mortgage-backed securities may be highly illiquid, subject to adverse changes to interest rates and to the risk that the payment obligations relating to the underlying asset are not met.

Since the instruments held by the Sub-Fund may be denominated in currencies other than the Base Currency, the Sub-Fund may be affected unfavourably by exchange control regulations or fluctuations in currency rates. For this reason, changes in currency exchange rates can affect the value of the Sub-Fund's portfolio and may impact the value of the Shares.

Exclusion of companies that do not meet certain ESG criteria from the Sub Fund's investment universe may cause the Sub-Fund to perform differently compared to similar funds that do not have such a policy

The Sub-Fund seeks to provide a return above the Benchmark; however the Sub-Fund may underperform the Benchmark.
