Markets Government bond yields moved higher across developed markets as rising energy prices and resilient economic data prompted investors to reassess the outlook for inflation and interest rates. Although the major developed market central banks left policy rates unchanged, a broadly hawkish tone reinforced expectations that interest rates will remain higher for longer, with markets continuing to price in hikes from the major central banks over the next 12 months.	
Helped Cross-country.	
Hurt Duration and curve.	
Outlook In our June 2026 Investment Quarterly, we raised the probability of expansion from 60% to 80%, allocating 40% each to above-trend growth and sub-trend growth, while reducing the risk of economic contraction to 20%, split evenly between recession and crisis at 10% each.

Month in Review

- **The portfolio underperformed the benchmark** by 15 basis points (bps), returning -0.43% versus -0.28% for the benchmark. The positioning in duration and curve detracted from performance whereas cross-country positioning contributed positively.
- **The portfolio held overweight UK front-end** due to our view that the Bank of England (BoE) is likely on hold this year and UK front-end remains a preferred value long (while allowing for some geopolitical and domestic political volatility), which detracted from performance, coupled with an overweight in Mexico 10-year as regulation drives increased bank demand for Treasuries and positive carry. Additionally, the portfolio also held overweight in the Czech Republic due to attractive valuations, which further dragged performance.
- **In curve, the portfolio held a flattening bias** in Japan 7s40s as the Bank of Japan (BoJ) was seen as behind the curve, but fiscal focus and possible supply restraint support flattening at the long end—which contributed negatively.
- **In cross-country, the portfolio held overweight Australia** versus Canada, due to our view that the Reserve Bank of Australia (RBA) is likely finished with the hiking cycle, while the Bank of Canada may shift to tightening next year, which contributed to performance.

Looking Ahead

- **In our June 2026 Investment Quarterly**, we raised the probability of expansion from 60% to 80%, allocating 40% each to above-trend growth and sub-trend growth, while reducing the risk of economic contraction to 20%, split evenly between recession and crisis at 10% each. The reassessment reflects easing geopolitical risks following de-escalation in the Middle East, the prospect of lower energy prices, and strengthening global capital expenditure (CapEx) driven by AI, energy security, defence, and infrastructure investment.
- **While growth remains resilient**, the key debate is whether the expansion ultimately proves productivity-led or inflationary.
- **Policy remains nuanced.** We expect the Federal Reserve to hold rates at 3 5/8% through year-end, balancing improving inflation, supported by lower energy costs—against the possibility of labour market tightness as the CapEx cycle broadens. Other major central banks are largely expected to remain on hold, with only limited scope for further hikes.
- **While we remain mindful of renewed geopolitical volatility** and the risk that enthusiasm around AI investment becomes excessive, the resilience of households and businesses, combined with structurally expansionary fiscal policies and a broadening global investment cycle, supports a constructive outlook for growth into 2027.

RISK PROFILE

The value of your investment may fall as well as rise and you may get back less than you originally invested. The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer. Issuers of debt securities may fail to meet payment obligations or the credit rating of debt securities may be downgraded. These risks are typically increased for below investment grade debt securities which may also be subject to higher volatility and lower liquidity than investment grade debt securities. Convertible bonds are subject to the credit, interest rate and market risks associated with both debt and equity securities and to risks specific to convertible securities. Convertible bonds may also be subject to lower liquidity than the underlying equity securities. Contingent convertible debt securities are likely to be adversely impacted should specific trigger events occur (as specified in the contract terms of the issuing company). This may be as a result of the security converting to equities at a discounted share price, the value of the

security being written down, temporarily or permanently, and/or coupon payments ceasing or being deferred. Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market and below investment grade debt securities may also be subject to higher volatility and lower liquidity than non-emerging market and investment grade debt securities respectively. Sustainability risk may materially negatively impact the financial condition or operating performance of an issuer and therefore the value of that investment. In addition, it may increase the Sub-Fund's volatility and/or magnify pre-existing risks to the Sub-Fund. The Sub-Fund seeks to provide a return above the Benchmark; however the Sub-Fund may underperform the Benchmark. Further information about risks can be found in the "Risk Information" section of the Prospectus.

The risk indicator assumes you keep the product for 5 years. The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document.
