

JPMorgan ETFs (Ireland) ICAV – US Equity Active UCITS ETF

In brief

- The JPM US Equity Active ETF aims to reflect the best ideas of our fundamental Research Analyst team to build a portfolio of 70-90 companies, with small sector deviations, which aims to outperform the S&P 500 Index over a cycle.
- As of 30 June 2026, the JPM US Equity Active ETF returned 5.35% net of fees in the first half of 2026, underperforming the S&P 500 Net Total Return Index which returned 10.01%.
- Over the period, we did not capture the full magnitude of the market's Artificial Intelligence (AI) driven rally. We did not own enough of the players involved in the bottlenecks for AI growth, whilst also owning companies with strong fundamentals that were not rewarded to the same magnitude. Looking ahead, we have adjusted positioning to reflect our updated fundamental views, whilst aiming to identify opportunities across the market.

Market environment

The first half of 2026 was dominated by two key themes— artificial intelligence (AI) and geopolitics—that played out in goal is not to predict every rotation, but to navigate inflection points and identify long-term opportunities.

At the start of opposing fashion across 1Q26 and 2Q26. This backdrop drove sudden rotations in market "winners" and led to levels of market concentration not seen in decades, with beta posting its strongest quarter on record while profitability delivered one of its weakest. As active participants, we recognize that the market environment sets the foundation for the returns investors experience. Our the year, mega-cap technology companies came under increased scrutiny as their projected AI capital expenditure (capex) estimates for 2026 and 2027 doubled. In turn, Investors began to question hyperscalers' ability to deliver returns against ever-rising AI-related capex, while concerns grew over the impact of new AI capabilities on the software-as-a-service (SaaS) model. The first three months of the year also saw renewed geopolitical tensions in the Middle East, which disrupted oil and gas supply, reigniting fears of rising inflation. Thus, at the end of March, Energy was the top-performing S&P 500 sector, returning 38%, while Information Technology fell in the bottom three at -9%.

AI was back in the spotlight in April, where investor confidence was renewed with growing 2026 capex estimates. As spending estimates surged, the market increasingly distinguished between those writing the checks and those receiving them, rewarding AI builders with unusual intensity and redefining market leadership. This enthusiasm extended to more traditionally cyclical, lower-quality areas of the industry that are benefiting from supply shortages and pricing power, such as memory. With AI enthusiasm reignited, the market largely looked past geopolitical concerns, leading the Industrials and Information Technology sectors to close June as the best-performing sectors on a YTD basis, both returning about 20%.

2026 YTD S&P 500 Index performance

Momentum stocks continue to dominate the market

Source: J.P. Morgan Asset Management as of 30 June 2026. All calculations are cumulative total return, including dividends reinvested for the stated period. For illustrative purposes only. Indices do not include fees or operating expenses and are not available for actual investment. **Past performance is not indicative of future results.**

Year-to-date 2026 Performance

In the first half of 2026, whilst we delivered positive stock selection in sectors like Consumer Cyclical (via an overweight to Hilton vs. underweights in Tesla and Booking) and Utilities (where we leaned into companies benefitting from the data centre build-out, such as Entergy, Nextera, and Southern vs. others like Constellation Energy), performance was challenged across most sectors, with stock selection in the Semiconductors and Hardware, Industrial Cyclical, and Payments & Business Services sectors as the largest areas of detractor.

Drivers of performance can be bucketed into three primary themes:

We underestimated the magnitude of AI capex spend & the resulting bottlenecks in the AI supply chain

- The highest-quality AI winners (for example, Nvidia or Broadcom, where we were overweight) did not have the same upside as those at the bottlenecks of the AI build-out (for example, Intuit, Cisco, AMD, or optical networking companies).
- This was most strongly reflected in negative stock selection in the Semiconductors and Hardware sector. The portfolio benefitted from overweights in names like Lam Research, Western Digital, and Texas Instruments, it did not own enough of the companies with the strongest performance over the period, such as AMD (which returned +171%), Intel (+278%), Applied Materials (+181%) or Sandisk (+858%). A similar theme played out in the Industrials sector, where we were underweight companies that tapped into the AI bottleneck related to power demand, such as Caterpillar and GE Vernova.
- Over the period, we evolved discussions around the duration and magnitude of the AI super cycle, including the range of outcomes. We have adjusted positioning in the AI winners to reflect updated fundamental views.

Fundamentals were not rewarded

- The other challenge for the portfolio was that, for many companies held, earnings increases were not rewarded: the earnings increased, but the stock prices fell. This partly reflected the broader momentum trend and the market preference for AI-exposed sectors or those companies with the very strongest positive earnings-revisions. Across the market, most sectors have 20% or more companies where earnings have increased and stock prices have fallen. This is rare to see in a bull market.
- This impacted the portfolio via holdings such as Mastercard, Arther J Gallagher, and Stryker. Despite the fact that consensus earnings have increased for these companies, the stock prices have fallen, and the multiples have contracted. Conviction in many of these names remains strong and we are finding opportunities to lean in.

Idiosyncratic stock selection hurt performance

- Over the period, the portfolio also experienced negative stock selection in some idiosyncratic names. Intuit, for example, suffered from disappointing results in its tax business and faced multiple overhangs due to AI-related concerns. Within Healthcare, Boston Scientific experienced weakening trends across several key products.

Portfolio Positioning

While the start to the year has been challenging, we continue to evolve our thinking and positioning. A few recent changes to the portfolio include:

Incorporated new information and revised valuation signal in AI enablers

- We, and the market, significantly underestimated AI spending needs, and estimates for capital expenditure have increased by more than 100% in one year. Our Core Research team has adapted & revised up estimates for the AI cohort significantly. Despite very strong performance in the cohort, there is still opportunity, but an active approach is key.
- Within the portfolio, we adjusted positioning in the “AI winners” such as Broadcom, Alphabet, and Advanced Micro Devices to reflect our updated fundamental views, and added new positions in Micron, Lam Research, and Corning.

Differentiating within “AI losers”, focusing on names where we have conviction:

- Within the portfolio we added to names like Shopify, Toast, and DoorDash, and exited Intuit following a reassessment of the investment case.

Finding attractive opportunities outside the AI winner/loser debate

- We also remain focused on identifying opportunities across all sectors, and have increased exposure where valuations appear disconnected from fundamentals. Within the portfolio, we added to names like Ecolab, Stryker, AutoZone and Mastercard that look attractive based on our long-term framework.

Overall, we maintain a portfolio of 83 holdings across sectors as of 30 June 2026. We generally keep sector allocations similar to the benchmark, and currently have roughly 1% overweights to sectors like Media (e.g. overweights to Amazon, Meta, DoorDash), Payments & Business Services (via overweights to Mastercard, Fidelity National Information Services) and Utilities (via overweights to Entergy, NextEra, Southern) and relative underweights in Industrial Cyclical, Consumer Staples, and Software & Services.

Outlook

We acknowledge that this period has been difficult for performance, and after 4 years of generally getting more right than wrong, over the last 18 months or so, we’ve gotten more wrong than right. Looking ahead, we maintain conviction in our process, whilst also acknowledging where we can improve.

We continue to invest in our research capabilities, and in particular, make sure that we can quickly admit when we’re wrong or when we get new information that changes our long-term view. This has happened frequently over the last year given the amount of significant change happening very quickly, which makes it difficult to forecast in the short-term. Particularly during these time periods, we have to be ready to move when we get opportunities and be flexible enough to change our view if the facts change, and importantly, sharing insights across the team have been important.

Looking ahead at the market and the opportunity set, we observe:

A strong fundamental backdrop: Our analysts project S&P 500 earnings growth of approximately +26% in 2026 and +22% in 2027. Further, the most recent quarter marked the sixth consecutive quarter of double-digit earnings growth, a streak we have not witnessed since the aftermath of the global financial crisis. This is a powerful foundation on which to build.

A shift in the market: The first phase of this cycle rewarded confidence in the size of the opportunity; the next, we believe, will reward delivery, specifically: companies that convert opportunity into revenues, margins, free cash flow, and returns on capital. As expectations have risen, so has the hurdle rate, making earnings visibility and balance-sheet strength more valuable.

The current market is prime for fundamental research: Our conviction in our investment process reflects our view that long-term returns are driven by earnings and dividends, while short-term swings are led by multiple expansion and sentiment. In our estimates, we normalize earnings to look through near-term noise. Taking a medium-and long-term view in a market with short-term momentum can sometimes be painful but is ultimately rewarding once the exuberance is gone.

Our sources of alpha remain intact: Valuation dispersion within sectors is high, which has historically been favourable for stock pickers, and periods of extreme market concentration have often set the stage for strong subsequent environments for active strategies once conditions normalize. Our team’s research quality, sector expertise, and investment philosophy are unchanged, and as demonstrated by the chart below, this disciplined process has added value across prior phases.

The only constant is change: From one decade to the next, there is rarely meaningful overlap among the market’s largest companies, underscoring the value of a forward-looking partner able to identify the next generation of leaders. We are already watching for the signals that this shift is underway: stronger reactions to cash flow and margins, broader participation, and greater differentiation after earnings.

Investment objective and risk profile

Investment objective

The objective of the Sub-Fund is to achieve a long-term return in excess of S&P 500 (Total Return Net) ("the Benchmark") by actively investing primarily in a portfolio of US companies.

Summary Risk Indicator

Lower risk

Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator assumes you keep the product for 5 year(s). The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document.

Risk profile

- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions, sometimes rapidly or unpredictably. If a company goes through bankruptcy or a similar financial restructuring, its shares in issue typically lose most or all of their value.
- Exclusion of companies that do not meet certain ESG criteria from the Sub-Fund's investment universe may cause the Sub-Fund to perform differently compared to similar funds that do not have such a policy.
- REITs and real estate related investments are subject to the risks associated with the ownership of real estate which may expose the relevant Sub-Fund to increased liquidity risk, price volatility and losses due to changes in economic conditions and interest rates.
- The Sub-Fund seeks to provide a return above the Benchmark; however, the Sub-Fund may underperform the Benchmark.
- The Benchmark has been included as a point of reference against which the performance of the Sub-Fund may be measured. The degree to which the Sub-Fund may resemble the composition and risk characteristics of the Benchmark will vary over time and its performance may be meaningfully different from the Benchmark.
