

JPMorgan US Research Enhanced Index Equity Active UCITS ETF

In brief

- **Objective:** Exploit stock-specific insights from our fundamental research team to deliver positive alpha at a low tracking error to the S&P 500 Index.
- As of June 2026, the JPMorgan US Research Enhanced Index Equity Active UCITS ETF (JREU) returned 9.15% on a YTD basis, trailing the S&P 500 Index benchmark, which was up 10.01% YTD, by -86bps.
- JREU's fundamentally driven process was challenged by three key themes: concentrated market leadership, stock price weakness despite stable or improving earnings, and a handful of stock-specific execution challenges. We believe market dynamics are creating attractive opportunities for differentiated stock selection moving forward.

Market environment

The first half of 2026 was dominated by two key themes— artificial intelligence (AI) and geopolitics—that played out in opposing fashion across 1Q26 and 2Q26. This backdrop drove sudden rotations in market "winners" and led to levels of market concentration not seen in decades. To put this into perspective, markets experienced extreme factor leadership, with beta posting its strongest quarter on record in 2Q26, while profitability delivered one of its weakest. As active participants, we recognize that the market environment sets the foundation for the returns investors experience over the short-to-medium term. Our goal is to navigate inflection points and identify long-term opportunities.

At the start of the year, mega-cap technology companies came under increased scrutiny as their projected AI capital expenditure (capex) estimates for 2026 and 2027 doubled. In turn, investors began to question hyperscalers' ability to deliver returns against ever-rising AI-related capex, while concerns grew over the impact of new AI capabilities on the software-as-a-service (SaaS) model. The first three months of the year also saw renewed geopolitical tensions in the Middle East, which disrupted oil and gas supply, reigniting fears of rising inflation. Thus, at the end of March, Energy was the top-performing S&P 500 sector, returning 38%, while Information Technology fell in the bottom three at -9%.

AI was back in the spotlight in April following first-quarter earnings, where investor confidence was renewed by strong fundamentals and potential benefits from AI. As spending estimates surged, the market increasingly distinguished between those writing the checks and those receiving them, rewarding AI builders with unusual intensity and redefining market leadership. This enthusiasm extended to more traditionally cyclical, lower-quality areas of the industry that are benefiting from supply shortages and pricing power, such as memory. With AI enthusiasm reignited, the market largely looked past geopolitical concerns, leading Industrials and Information Technology to close June as the best-performing sectors on a YTD basis, both returning about 20%.

2026 YTD S&P 500 Index performance

US hyperscaler capex estimates by year (USD, billions)

Source: J.P. Morgan Asset Management, Factset. Data as of June 2026. All calculations are cumulative total return, including dividends reinvested for the stated period. Past performance is not a reliable indicator for current and future performance. *Hyperscaler capex includes Alphabet, Amazon, Meta, Microsoft and Oracle. Guide to the Markets – EMEA. Data are as of 7 July 2026.

YTD 2026 Fund performance

Diving into YTD performance attribution, the end of the second quarter was most challenging for the strategy and brought down the trailing numbers. In May specifically, JREU underperformed the benchmark by ~80bps; a three-standard deviation event since JREU's inception. This weakened performance offset the positive alpha seen through the end of April.

Thus, on a YTD basis, contribution from our positioning in sectors like Utilities and Consumer Cyclical was offset by weakness from positioning in the Software & Services and Hardware & Semiconductor sectors.

Software & Services: Broadly, this sector was hit hard in the beginning of the year as advances in AI code generation raised questions about the durability of the competitive moats of SaaS businesses. In other words, this sector was deemed an "AI loser". From our perspective, there is no doubt that AI is one of the most consequential technological shifts in a generation, but we believe that software businesses are more than their code. The strongest businesses in this space have deep customer relationships and established distribution networks, workflow integration that creates high switching costs and decades of proprietary data. Yet, the indiscriminate sell-off was broad and felt even in the high-quality businesses. Here, having an overweight to names like ServiceNow and Cognizant hurt performance.

- **Service Now:** Focused on automating and orchestrating cloud-based business workflows across organizations, serving as a unified platform for end-to-end digital enterprise transformation. Given Service Now's strength in policy enforcement and cross-system execution, we see AI more likely to complement their business, rather than replace.
- **Cognizant:** A global information technology (IT) services company providing digital transformation and business process outsourcing solutions across industry verticals. The company is poised to benefit from long-standing industry relationships, structurally low costs, and investment in digital & AI capabilities. We see IT as a broad beneficiary from AI automation given IT spend is required to implement AI in enterprises and emerging areas of demand, such as agentic commerce and digital labor.

Hardware & Semiconductors: In this space, the story centers around names that we didn't own enough of, and which experienced material returns in a short period of time. On a YTD basis, four of the top five contributors come from this space (**Seagate Technology, Lam Research, Micron Technology, and Western Digital**), highlighting our active positioning in this sector. Yet, four of the top five performance detractors were also in this space. Here, not owning enough / having an underweight to names like **Intel, Sandisk, and Applied Materials** hurt performance. Overall, we've seen the market is more willing to pay up for the option value of some of these potential ambitions, leading to some extreme moves.

- **Seagate Technology** manufactures hard disk drives for data center and consumer applications. The company's improved margins, strong execution on data storage technology, and improved balance sheet make Seagate Technology one of our preferred ways to participate in the AI build-out in this space. **Lam Research** designs and manufactures wafer fabrication equipment for semiconductor production. Further, the company has strong competitive positioning in the etching and deposition processes and a history of strong execution.
- **Intel** and **Sandisk** are also players in this space – Intel manufactures semiconductor processors and chips used in data centers and computing devices, while Sandisk designs and manufactures memory storage products for consumer and enterprise applications. Looking at these companies from a fundamental perspective, we see Intel at a cost and process technology disadvantage vs. peers which could contribute to further market share loss. Within the foundry business, larger and more established competitors have locked in multi-year agreements with clients, further challenging Intel's foundry business growth. Our team acknowledges that for the next two or so years, Sandisk will continue to benefit from the memory supply/demand imbalance. Yet, we see long-term potential constrained by structural industry dynamics, namely: a cyclical and competitive industry with limited supply-side controls.

Strong long-term outperformance includes periods of underperformance

A difficult backdrop for our investment framework: This has been an extreme and, in many ways, unusual period. Earnings across a broad range of sectors have continued to rise, yet stock prices have re-rated lower. In other words, this has been one of the few bull markets in which such a high proportion of companies are growing earnings while their share prices decline.

The chart on the left-hand side of the next page shows that momentum has been pervasive, and the magnitude of moves has been greater than we anticipated. In our view, a combination of fear and greed is driving the market: investors are assigning higher multiples to areas with substantial "option value" while paying little attention to fundamentals.

In times like this, our focus is on ensuring we are not inadvertently taking a shorter-term view or allowing behavioral biases to influence our decisions. We know that this kind of backdrop is a difficult one for our process. Our framework is grounded in our assessment of long-term earnings power and is, by design, countercyclical. When the market is not focused on long-term fundamentals our process will naturally face headwinds. Over time, however, we expect the market's attention to return to long-term fundamentals.

What we got wrong: Against this backdrop, we want to be direct about where our judgment fell short.

Underestimating the scale and duration of the AI cycle: We underestimated the magnitude of AI-related capital expenditure — a miss shared by the hyperscalers themselves, who have doubled their own capex expectations. While we had conviction in AI as a long-term theme, we underestimated the speed, scale and market impact of the spending curve, and our more measured positioning in the immediate beneficiaries weighed on relative performance. As a consequence, we underappreciated the bottlenecks that would form in areas like memory and CPUs and the earnings power of certain AI-levered names.

Stock-specific misses: When performance is challenged, the team spends considerable time with our Research Analysts working through a single, disciplined question: are we early, or are we wrong? We use duration to our advantage, but we do not always get the timing right, which is why we revisit each investment thesis to confirm it remains on track. Where a thesis is no longer intact, we develop a plan to move on. Where we believe we are early, we re-evaluate the thesis drivers, and if appropriate, add to positions. This period, our usual balance of "rights" did not materialize, and the two or three "wrongs" were magnified. Two examples illustrate the range of what we experienced:

- **Intuit (we were early):** Our thesis here centered on TurboTax gaining market share. Yet, execution issues within the DIY tax business weighed on investor confidence and reduced our conviction in the investment case. Consistent with our disciplined research process, we reassessed the position and reduced exposure as the risk-reward profile changed.
- **Boston Scientific Corp (thesis drift):** We added to Boston Scientific at the beginning of the year, with a thesis built around a positive risk-reward from a competitive moat around electrophysiology and its product pipeline. Yet, new guidance from earnings results suggested the company misjudged the competitive landscape, leading to skepticism on near-term execution. Here too, the portfolio moderated its active weight in response to the new information.

Moving forward: Humility is an essential characteristic for any investor; in any given year, we accept that we must learn from the markets and our mistakes. There's no doubt that AI is a transformative innovation that is evolving rapidly. In certain sectors and sub-sectors, that evolving picture points to a super-cycle that is likely to extend into 2028. To capture this accurately, our Research Analysts in select sectors have responded by updating the range of outcomes to reflect evolving fundamentals. The right-hand chart on the next page illustrates how the team has adapted estimates in the AI cohort. Despite strong performance, there is still opportunity, but we believe an active approach is key.

Sharpening risk management: Given the degree of market concentration, risk management is a significant focus for the team. This means adjusting our forecasts as new information emerges and re-evaluating the full scope of our theses. It also means thinking carefully about position sizing relative to our rankings. For example, from a risk-management perspective, it can make sense to have some exposure to a company like **Applied Materials** because of its high contribution to stock-specific tracking error, even if at an underweight.

Supporting our analysts: We are focused on ensuring our Research Analysts feel supported. We are increasing cross-sector collaboration, leveraging our network and industry relationships, as well as reinforcing a culture in which our analysts feel empowered. The business is also leveraging technology to support our analysts: we're testing out an LLM that will review broker research and analyst notes versus our investment thesis to compile potential thesis drifts.

AI Basket contains 35 stocks selected by US DoR Team: AMAT, AMD, ANET, APH, ARM, ASML, AVGO, DELL, GLW, INTC, KLAC, LRCX, MPWR, MRVL, MU, NVDA, OLED, SMC, STX, TER, TSM, WDC, MSFT, ORCL, PLTR, AMZN, GOOGL, META, CEG, VST, CAT, ETN, GEV, HWM, VTR. Representing 35% of S&P 500 Expected Return: AI Basket vs. S&P 500. Expected Return (5 year CAGR) Average Expected Return Revisions reflect the mean change in analysts' expected return estimates for a group of securities over a given period. This measure incorporates updates to earnings forecasts, exit valuation multiples, and dividend expectations.

Portfolio positioning

In terms of portfolio positioning, we remain balanced and diversified, finding opportunities in high-quality names. As our Research Analysts updated forecasts to reflect the changing backdrop, we remained active and increased exposure to beneficiaries such as **Western Digital**, which was a meaningful contributor to performance. From a sector perspective, we take very small positions relative to the index, as our overall positioning is driven by our bottom-up stock selection. While recent market dynamics have challenged portions of our process, they have also expanded the opportunity set.

We continue to see attractive investments across the AI ecosystem, such as:

- **Trane Technologies** (Industrial Cyclical): Premium positioning in HVAC, consistently outpacing peers in topline growth and margin expansion, driven by global share gains, strong backlog/orders, and robust pricing power. Commercial HVAC is the fastest-growing segment, with data centers as a key driver, but growth is broad-based across verticals.
- **Lam Research** (Hardware & Semiconductors): A leading U.S.-based supplier of wafer fabrication equipment. AI-infrastructure capex is driving sustained demand across both leading-edge logic and advanced memory, supporting what we view as a multi-year upcycle.

Yet, we also see opportunities in high-quality businesses whose long-term earnings power we believe is underappreciated by the market. For example:

- **Aon** (Insurance): A high-quality insurance broker with large customer exposure, including data centers and M&A activity, which is valuable in the current environment.
- **Lowe's** (Retail): Home improvement retail player positioned to capture greater market share, leaning into AI integration as part of its digital ecosystem, and a management team focused on improving business execution.

Outlook

A strong fundamental backdrop: Our analysts project S&P 500 earnings growth of approximately +26% in 2026 and +22% in 2027. Further, the most recent quarter marked the sixth consecutive quarter of double-digit earnings growth, a streak we have not witnessed since the aftermath of the global financial crisis. This is a powerful foundation on which to build.

A shift in the market: The first phase of this cycle rewarded confidence in the size of the opportunity; the next, we believe, will reward delivery, specifically: companies that convert opportunity into revenues, margins, free cash flow, and returns on capital. As expectations have risen, so has the hurdle rate, making earnings visibility and balance-sheet strength more valuable.

The current market is prime for fundamental research: Our conviction in our investment process reflects our view that long-term returns are driven by earnings and dividends, while short-term swings are led by multiple expansion and sentiment. In our estimates, we normalize earnings to look through near-term noise. Taking a medium- and long-term view in a market with short-term momentum can sometimes be painful but is ultimately rewarding once the exuberance is gone.

Our sources of alpha remain intact: Valuation dispersion within sectors is high, which has historically been favorable for stock pickers, and periods of extreme market concentration have often set the stage for strong subsequent environments for active strategies once conditions normalize. Our team's research quality, sector expertise, and investment philosophy are unchanged, and as demonstrated by the chart below, this disciplined process has added value across prior phases.

The only constant is change: From one decade to the next, there is rarely meaningful overlap among the market's largest companies, underscoring the value of a forward-looking partner able to identify the next generation of leaders. We are already watching for the signals that this shift is underway: stronger reactions to cash flow and margins, broader participation, and greater differentiation after earnings.

JREU - Rolling 3 years excess returns since inception¹ (%)

Composite Description: The composite contains all discretionary accounts, including pooled funds, directly invested according to JPMIM's US REI (Research Enhanced Index)100 (ESG) strategy. The strategy's objective is to achieve long-term capital appreciation by investing primarily in U.S. equity securities using a responsible investing approach as compared to the S&P 500 Index excluding 30% withholding tax. Potential holdings are categorized using a strategic classification framework and companies are evaluated based on proprietary ESG research. The composite was created in April 2022, and the inception date is 01 November 2018.

Fee Schedule: The returns shown for this composite are the asset-weighted averages of the performance of all individual portfolios in the composite using beginning of period weightings. The performance results reflect the reinvestment of income, deduction of transaction costs, and are net of withholding taxes, where applicable. Gross returns do not reflect the deduction of management fees or any other expenses that may be incurred in the management of the account. Net returns are net of model fees in effect for the respective time period. The model fee applies for at least one fiscal year and is reviewed annually; therefore, it may change from year to year. Information on previous years' model fees is available upon request. Model net returns are calculated by subtracting 1/12th of the model fee listed in the fee disclosure section from the gross composite return on a monthly basis. The model fee is either the highest tier of the fee schedule in effect for the period, or a higher value, whichever is required to ensure the composite model net of fee return is lower than or equal to the composite net of fee return calculated using actual fees. The current model fee applied is 0.30%. The standard annual fee schedule is as follows: 0.30% on the first \$25 million of assets managed; 0.20% thereafter. Individual clients are subject to negotiation and may deviate from the typical fee presented within this report. Actual fees charged may vary by account due to various conditions described in Part IIA of Form ADV.

Firm Definition: For the purpose of GIPS® compliance, the Firm is defined as J.P. Morgan Investment Management Inc. (JPMIM) consisting of the assets of clients invested in U.S. managed products. The Firm also includes Separately Managed Accounts over which JPMIM has full and sole discretion. JPMIM is marketed under J.P. Morgan Asset Management.

Compliance Statement: J.P. Morgan Investment Management Inc. claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. J.P. Morgan Investment Management Inc. has been independently verified for the periods 2001-2024. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Internal Dispersion: Internal dispersion measures the spread of annual returns of individual portfolios within a composite. It is calculated using the asset-weighted standard deviation of the gross returns of portfolios that were included in the composite for the full year. Internal dispersion is not shown for calendar years with five or fewer portfolios in the composite for the full year.

Benchmark Description: The benchmark is the S&P 500 Index excluding 30% withholding tax. The index returns are provided to represent the investment environment existing during the time periods shown and are not covered by the report of independent verifiers. For comparison purposes the index is fully invested, which includes the reinvestment of income. The returns for all indices, except for ICE indices, do not include transaction costs, management fees, or other expenses. ICE indices include transaction costs as of January 2, 2024.

Composite Listing: A list of composite descriptions, pooled fund descriptions for limited distribution pooled funds, a list of broad distribution pooled funds, policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

Standard Deviation: The three year annualized standard deviation measures the variability of the composite and benchmark returns over the preceding 36 month period. Standard deviation measures are not shown where there are less than 36 monthly observations available. Gross returns were used to calculate the three year annualized ex post standard deviation of the composite.

Past and Future Performance: Past performance is no guarantee of future results. As with any investment vehicle, there is always the potential for gains as well as the possibility of losses.

GIPS Trademark: GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Past performance is not necessarily a reliable indicator of current and future results.

Investment Objective and Risk Profile

JPMorgan ETFs (Ireland) ICAV – US Research Enhanced Index Equity Active UCITS ETF

Investment objective

The Sub-Fund aims to achieve a long-term return in excess of S&P 500 (Total Return Net) (the "Benchmark") by actively investing primarily in a portfolio of US companies.

Summary Risk Indicator

1	2	3	4	5	6	7
Lower risk						Higher risk

The risk indicator assumes you keep the product for 5 years. The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document. The manager seeks to achieve the stated objectives. There can be no guarantee the objectives will be met.

Risk profile

- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.
- To the extent that the Sub-Fund uses financial derivative instruments, the risk profile and the volatility of the Sub-Fund may increase.
- The single market in which the Sub-Fund invests may be subject to particular political and economic risks, and as a result, the Sub-Fund may be more volatile than more broadly diversified funds.
- The Sub-Fund seeks to provide a return above the Benchmark; however, the Sub-Fund may under-perform its Benchmark.
- Exclusion of companies that do not meet certain ESG criteria from the Sub-Fund's investment universe may cause the Sub-Fund to perform differently compared to similar funds that do not have such a policy.
- Further information about risks can be found in the "Risk Information" section of the Prospectus.

Risk profile

- The Benchmark has been included as a point of reference against which the performance of the Sub-Fund may be measured. The Sub-Fund will bear a close resemblance to its Benchmark.
- The Sub-Fund will not seek to track the performance of or replicate the Benchmark, rather the Sub-Fund will hold a portfolio of equity securities (which may include but will not be limited to Benchmark Securities) which is actively selected and managed with the aim of delivering an investment performance which exceeds that of the Benchmark over the long-term.

It is recipient's responsibility to obtain any regulatory approvals and complying with requirements applicable to them.

To the extent permitted by applicable law, we may record telephone calls and monitor electronic communications to comply with our legal and regulatory obligations and internal policies. Personal data will be collected, stored and processed by J.P. Morgan Asset Management in accordance with our privacy policies at <https://am.jpmorgan.com/global/privacy>.

J.P. Morgan Asset Management is the brand for the asset management business of JPMorgan Chase & Co. and its affiliates worldwide. All rights reserved

For Professional Clients / Qualified Investors only – not for Retail use or distribution.

The products mentioned in this document have been registered for public distribution in certain jurisdictions, which may include EEA countries, Switzerland and the UK. Certain share classes may not be authorised or their offering may be restricted in your jurisdiction. It is each investor's responsibility to ensure compliance with local laws and regulations. Please contact your J.P. Morgan Asset Management representative or refer to the latest available Prospectus, the Key Information Document (KID) and any applicable local offering document for further information. Prior to investing in a product, investors are advised to take all necessary legal, regulatory and tax advice on the consequences of an investment in the products. Shares or other interests may not be offered to or purchased directly or indirectly by US persons.

All transactions should be based on the latest available Prospectus, KID and any applicable local offering document. These documents together with the annual report, semi-annual report, instrument of incorporation and sustainability-related disclosures, are available in English from JPMorgan Asset Management (Europe) S.à r.l., 6 route de Trèves, L-2633 Senningerberg, Grand Duchy of Luxembourg, your financial adviser or your J.P. Morgan Asset Management regional contact or at www.jpmorganassetmanagement.ie. A summary of investor rights is available in English at <https://am.jpmorgan.com/lu/investor-rights>. J.P. Morgan Asset Management may decide to terminate the arrangements made for the marketing of its collective investment undertakings.

Units in Undertakings for Collective Investment in Transferable Securities ("UCITS") Exchange Traded Funds ("ETF") purchased on the secondary market cannot usually be sold directly back to UCITS ETF. Investors must buy and sell units on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current net asset value when buying units and may receive less than the current net asset value when selling them.

This is a marketing communication and as such the views contained herein do not form part of an offer, nor are they to be taken as advice or a recommendation, to buy or sell any investment or interest thereto. Reliance upon information in this material is at the sole discretion of the reader. Any research in this document has been obtained and may have been acted upon by J.P. Morgan Asset Management for its own purpose. The results of such research are being made available as additional information and do not necessarily reflect the views of J.P. Morgan Asset Management. Any forecasts, figures, opinions, statements of financial market trends or investment techniques and strategies expressed are, unless otherwise stated, J.P. Morgan Asset Management's own at the date of this document. They may not necessarily be all-inclusive and may be subject to change without reference or notification to you. The value of investments and the income from them may fluctuate in accordance with market conditions and taxation agreements and investors may not get back the full amount invested. Changes in exchange rates may have an adverse effect on the value, price or income of the products or underlying overseas investments. Past performance and yield are not a reliable indicator of current and future results. There is no guarantee that any forecast made will come to pass. Furthermore, there can be no assurance that the investment objectives of the investment products will be met. J.P. Morgan Asset Management is the brand name for the asset management business of JPMorgan Chase & Co. and its affiliates worldwide. To the extent permitted by applicable law, we may record telephone calls and monitor electronic communications to comply with our legal and regulatory obligations and internal policies. Personal data will be collected, stored and processed by J.P. Morgan Asset Management in accordance with our EMEA Privacy Policy www.jpmorgan.com/emea-privacy-policy.
