Markets July was shaped by shifting market focus. Early US-Iran tensions briefly drove oil higher and revived inflation concerns, before attention returned to second-quarter earnings and the durability of artificial intelligence (AI)-related returns. The oil move still prompted investors to reassess the policy path.	
Helped Long rates and foreign exchange (FX) in Brazil, long FX in Korea and Nigeria.	
Hurt Long rates and FX in Hungary, South Africa and India.	
Outlook We remain tactical in emerging market (EM) local-currency debt, with FX anchoring the strategy. In rates, we prefer selective duration where risks are priced or moves are country-specific. In FX, we keep modest positive beta with a carry bias, while monitoring the Federal Reserve (Fed) and USD for clearer direction. EM credibility and supportive technicals help, but sticky inflation, softer fiscal trends and potential Fed hikes argue against a broad structural trade.

Fund Overview

Investment objective

The objective of the Sub-Fund is to achieve a long-term return in excess of J.P. Morgan GBI-EM Global Diversified (Total Return Gross) ("the Benchmark") by actively investing primarily in emerging market local currency debt securities, using financial derivative instruments to gain exposure to underlying assets, where appropriate.

Month in Review

- **We entered July with a constructive but measured stance** in rates, maintaining a modest duration overweight while increasingly emphasising market selection and curve positioning over outright directional risk.
- **Early in the month**, we reduced front-end exposure and shifted toward longer-dated bonds, reflecting a preference for carrying duration in markets where valuations remained attractive while acknowledging uncertainty around the global policy outlook. As the month progressed, duration was brought closer to neutral as we became more selective. By month end, our rates positioning reflected a disciplined risk-management approach, preserving flexibility while retaining exposure to markets where we believed local fundamentals and valuations remained supportive.
- **In FX, July was characterised by an evolution** from a broadly constructive US dollar stance toward a more balanced approach as market expectations around the Federal Reserve shifted. We began the month favouring the dollar and exposure to selected frontier currencies, reflecting our view that further Fed tightening risks remained underappreciated.

Looking Ahead

- **Resilient global growth**, a manageable inflation shock and a tilt toward a weaker USD create a supportive backdrop for EMD into the second half of 2026. EM growth is projected around 4.1%, with improving EM-developed markets (DM) growth advantage as Europe slows, while China’s 2026 growth is nudged up to 4.6%: strong first-quarter momentum is eased in the second quarter but helped by targeted fiscal support.
- **Energy risks look less severe** than initially feared as Hormuz concerns fade and offsets temper the shock. Key risks remain renewed US exceptionalism, additional Fed hikes, a deeper and longer crisis, and EM and DM political volatility.
- **Inflation in EM has risen to roughly 3.8%** from 2.8% pre-crisis—well below the 2022 surge and concentrated in parts of Asia—while demand pressures appear limited and expectations relatively anchored. Upside risks include second-round effects and El Niño, varying by country.
- **EM central banks are largely fine-tuning policy** rather than starting new tightening cycles, helped by high real rates versus DMs. Sovereign fundamentals remain solid: stable debt and deficits, continued rating upgrades, and limited default risk even under a prolonged oil shock. Historically, EMD has held up in hiking cycles driven by growth and productivity more than inflation or fiscal fears.

RISK PROFILE

The value of your investment may fall as well as rise and you may get back less than you originally invested. Government debt securities, including those issued by local governments and government agencies, are subject to market risk, interest rate risk and credit risk. Governments may default on their sovereign debt and holders of sovereign debt (including the Sub-Fund) may be requested to participate in the rescheduling of such debt and to extend further loans to governmental entities. The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer. Issuers of debt securities may fail to meet payment obligations or the credit rating of debt securities may be downgraded. These risks are typically increased for below investment grade debt securities which may also be subject to higher volatility and lower liquidity than investment grade debt securities. The credit worthiness of unrated debt securities is not measured by reference to an independent credit rating agency. Distressed debt securities carry a high risk of loss, as the issuers are either in severe financial distress or in bankruptcy. Contingent convertible debt securities are likely to be adversely impacted should specific trigger events occur (as specified in the contract

terms of the issuing company). This may be as a result of the security converting to equities at a discounted share price, the value of the security being written down, temporarily or permanently, and/or coupon payments ceasing or being deferred. Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market and below investment grade debt securities may also be subject to higher volatility and lower liquidity than non-emerging market and investment grade debt securities respectively. Investment in onshore debt securities issued within the PRC through Bond Connect are subject to regulatory change and operational constraints which may result in increased counterparty risk. Sustainability risk may materially negatively impact the financial condition or operating performance of an issuer and therefore the value of that investment. In addition, it may increase the Sub-Fund's volatility and/or magnify pre-existing risks to the Sub-Fund. The Sub-Fund seeks to provide a return above the Benchmark; however the Sub-Fund may underperform the Benchmark. Further information about risks can be found in the "Risk Information" section of the Prospectus.

The risk indicator assumes you keep the product for 5 years. The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document.
