Markets US IG Corporate option-adjusted spreads widened by 4bps to 78bps according to the Bloomberg US Corporate Investment Grade Index. The asset class returned -1.67% on a total return basis.	
Helped Insurance underweight.	
Hurt Communications overweight.	
Outlook US investment-grade credit posted a resilient but more complicated July. Spreads drifted modestly wider from historically tight starting levels, pressured by record gross issuance of \$138 billion. Supply was unusually back-end heavy, led by large technology borrowers and merger-related financing, which forced even top-tier TMT names to reprice wider after an unexpected wave of hyperscaler deals. Outside TMT, performance was clearly bifurcated. Financials outperformed as bank earnings broadly beat expectations and reinforced solid fundamentals. Despite higher supply and episodic geopolitical risk, demand remained the market's anchor: investors concentrated net buying in large-cap issuers and favoured front-to-intermediate maturities where all-in yields still looked attractive.

Fund Overview

Investment objective

The Sub-Fund aims to achieve a long-term return in excess of Bloomberg US Corporate Bond Index (the "Benchmark") by actively investing primarily in a portfolio of investment grade US Dollar denominated corporate debt securities.

Month in Review

- **The Fund returned -1.86% (gross of fees) over the month**, underperforming the benchmark by 19bps.
- **At the headline level**, we increased our underweight spread duration position relative to the benchmark and decreased our overweight duration times spread (DTS) position. We are out-yielding and out-spreading the benchmark. Our overweight DTS position detracted from performance versus the benchmark through the month.
- **In terms of sector allocation**, our largest overweights from a DTS perspective are in banking and communications. Our overweight to banking and communications detracted from performance relative to the benchmark over the month.
- **Our largest underweights** from a DTS perspective are in capital goods and insurance. Our underweight to capital goods and insurance contributed to performance relative to the benchmark over the month.
- **At an issuer level**, our overweight to Sopapilla, underweight to IBM and underweight to Alphabet were the biggest contributors to performance. Our overweight to Oracle, overweight to Meta and overweight to Charter were the biggest detractors.

Looking Ahead

- **US IG credit should remain broadly stable** and carry-supported, with returns increasingly driven by rates volatility, inflation prints, and the market's ability to digest primary supply rather than further broad spread compression.
- **Fundamentals look constructive:** second-quarter earnings showed broad-based strength with a high beat rate, and revenue and EBITDA growth remains positive. Capital expenditure tied to AI infrastructure is supporting activity, with momentum also broadening into aerospace & defence, energy and healthcare. The labour market remains an important pillar, though recent data bears watching for early signs of credit-cycle inflection.
- **On policy, the Federal Reserve is expected to stay** on hold near term, but the risk of a later-year hike has risen, given core inflation remains meaningfully above target. Technically, August issuance should step down sharply from July's record, offering some relief; net supply appears manageable and demand has been durable.
- **Dispersion should stay elevated:** hyperscaler and datacentre and select TMT have repriced on heavy supply, while financials remain well supported but look relatively stretched versus non-financials. The strategy bias favours yield capture with disciplined security selection and careful primary participation over broad duration extension.
- **Europe looks constructive** but increasingly issuer-selective as the macro and policy mix becomes more nuanced. Corporate fundamentals remain broadly solid, with revenues and earnings tracking ahead of expectations, while financial-sector capital generation, particularly in banking and insurance, continues to run above plan with robust solvency and capital ratios.
- **The main uncertainty is European Central Bank policy:** odds of a September hike are roughly balanced even as inflation moderates, and this overlays emerging labour softness in Germany and France plus elevated political risk into autumn. That mix argues for carry over compression and a focus on idiosyncratic value.

RISK PROFILE

The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer. Issuers of debt securities may fail to meet payment obligations or the credit rating of debt securities may be downgraded. These risks are typically increased for below investment grade debt securities which may also be subject to higher volatility and lower liquidity than investment grade debt securities. The credit worthiness of unrated debt securities is not measured by reference to an independent credit rating agency.

Contingent convertible debt securities are likely to be adversely impacted should specific trigger events occur (as specified in the contract terms of the issuing company). This may be as a result of the security converting to equities at a discounted share price, the value of the security being written

down, temporarily or permanently, and/or coupon payments ceasing or being deferred. Please see the additional information under "Contingent Convertible Securities" in the "Risk Information" section of the Prospectus. Exclusion of issuers that do not meet certain ESG criteria from the Sub-Fund's investment universe may cause the Sub-Fund to perform differently compared to similar funds that do not have such a policy.

The Sub-Fund seeks to provide a return above the Benchmark; however the Sub-Fund may underperform its Benchmark.

The risk indicator assumes you keep the product for 5 years. The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document.
