Markets July was driven by two key themes: US-Iran tensions and the artificial intelligence (AI) investment cycle. Early geopolitical concerns lifted oil prices and commodities, but focus soon shifted back to earnings and AI. Investors became more selective, favouring companies with clearer paths to monetising AI, while semiconductor stocks faced pressure from high valuations, export control risks and China's technological advances. As technology weakened and energy and financials rallied, value stocks significantly outperformed growth stocks.	
Helped Industrials and information technology.	
Hurt Energy and financials.	
Outlook As nations address climate change, new regulations, policy shifts and changes in technologies and consumer preferences will impact companies and portfolios. This Fund seeks to invest in companies that are well positioned for this transition, building stronger portfolios for a low-carbon world.	

Past performance and forecast is not a reliable indicator of current and future results.

Month in Review

- **Global developed equity markets were positive in July.** The Solactive J.P. Morgan Asset Management Carbon Transition Global Equity CTB Index tracked by this Fund underperformed the traditional MSCI World Index.
 - **Security selection in the industrials and information technology sectors** contributed to performance. Within the information technology sector, underweight positions in Intel, Marvell Technology, Corning and Lam Research added value as all these names fell over the month. Likewise, underweight exposures in Caterpillar and GE Vernova helped performance in July.
 - **Security selection in the energy and financial sectors** was the main detractors to performance. Within the energy sector, our underweight exposure to carbon-intense coal and integrated oil & gas companies hurt performance, as names like Exxon Mobil and Chevron rallied over the month. Underweight positions in HSBC Holdings and Charles Schwab in the financial sector negatively impacted performance in July.
 - **At an individual security level,** our overweight exposures in KLA and Tokyo Electron in the technology sector hurt performance.
 - **This Fund seeks to achieve a reduction in carbon intensity** without relying on sector deviations, while focusing on individual security selection by overweighting winners of the carbon transition and underweighting the companies that face greater risk.
- ### Looking Ahead
- **The move towards a lower-carbon economy** will impact companies, portfolios and our clients. This Fund seeks to identify the companies that are well positioned for this transition.
 - **The portfolio takes a comprehensive approach** to transition readiness that considers both risks and opportunities by evaluating companies based on how well they manage greenhouse gas emissions, resources and climate-related risks. This results in a meaningful reduction in carbon intensity relative to the investible universe.

RISK PROFILE

The value of equities may go down as well as up in response to the performance of individual companies and general market conditions, sometimes rapidly or unpredictably. If a company goes through bankruptcy or a similar financial restructuring, its shares in issue typically lose most or all of their value.

Since the instruments held by the Sub-Fund may be denominated in currencies other than the Base Currency, the Sub-Fund may be affected unfavourably by exchange control regulations or fluctuations in currency rates. For this reason, changes in currency exchange rates can affect the value of the Sub-Fund's portfolio and may impact the value of the Shares.

The exclusion of companies that do not meet certain ESG criteria from the Sub-Fund's Investable Universe, through the screening performed as part of

the index methodology described above, may cause the SubFund to perform differently compared to similar funds that do not have such a policy.

To the extent that the Sub-Fund uses financial derivative instruments, the risk profile and the volatility of the Sub-Fund may increase. That notwithstanding, the risk profile of the Sub-Fund is not expected to significantly deviate from that of the Index as a result of its use of financial derivative instruments.

The Sub-Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Sub-Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

The risk indicator assumes you keep the product for 5 years. The risk of the product may be significantly higher if held for less than the recommended holding period. In the UK, please refer to the synthetic risk and reward indicator in the latest available key investor information document.
